

For Immediate Release

## **New Version of the RoomChecker® Hotel Room Inspection App Released**

CEDAR RAPIDS, IA – August 6, 2014 – A new and improved version of the RoomChecker® mobile app has been released. RoomChecker® collects real-time hotel room inspections from a mobile device and provides status and trend reports. RoomChecker® enables mobile communication for housekeeping managers and provides automatic issue communications to their staff. This version supports iPhone™, iPad™, and Android™. There is no need to purchase mobile devices since the hotel can use the devices already in place.

This version has many additions and enhancements. The app is easily customizable to fit any type of room inspections. The user can define room types, items for inspection of each room type, priorities, and room status just to name a few. New features also include: prioritizing open issues, front desk support, and offline inspections.

"Quality defines the culture of an establishment and guests understand that when you give them a consistent and positive experience, they will remain your customers! qMetrix™ is dedicated to making sure hotels keep dedicated guests happy and loyal, while supporting staff with real-time actionable information with a wireless digital solution improving the hotel's bottom line results," said Willie Sneller, principal and co-founder of qMetrix Group.

The RoomChecker® mobile app moves room inspections from traditional completion of paper forms to collection of electronic data. This type of collection provides many benefits since issues, upon submission, are automatically sent to staff responsible for resolution. Open issues are tracked through completion so nothing falls through the cracks. Trend reports are available to help with room, item and staff management. The RoomChecker® app also eliminates the mounds of paperwork that is filed away without analysis or summary reports ever being completed.

### **About qMetrix Group**

The qMetrix Group focuses on developing innovative software solutions for quality improvement. The group develops systems to gather and report quality metrics through electronic integration or customized apps using wireless devices such as tablets and smartphones. qMetrix then provides secure, customized, web-based reports to better improve the real-time performance for any organization seeking to improve quality and efficiency. qMetrix supports applications for Healthcare, Hospitality and Transportation.
