The qMetrix Group Introduces Expansion of Healthcare Product with Compliance Scoring

CEDAR RAPIDS, IA – January 13, 2014 – The qMetrix Group introduces an expansion of their healthcare products with the addition of a unique feature — *immediate compliance scoring of patient care data*. qMetrix for Healthcare (QMHC) has been designed with the goal of quality improvement in patient care and US government regulation compliance. QMHC uses electronic health record (EHR) data, consolidates these elements with manually collected information, and provides performance and trending reports. This expansion significantly increases the sophistication of the solution by evaluating the data provided against the US government requirements.

The solution reduces the work required of quality improvement managers by using existing EHR data. Real-time compliance reports allow staff to easily address areas of concern and make corrections. Hospital executives will no longer wait months to review compliance ratings and initiatives to improve quality can be implemented in a much more timely fashion.

“The extensive time and effort qMetrix has put into this expansion process will provide our customers with a level of transparency they have yet to experience,” comments Robin Mangold, principal of the qMetrix Group. “This real-time compliance visibility will make more relevant quality improvement initiatives possible. We are excited about the impact our expansion will have on patient outcomes.”

qMetrix for Healthcare is a single application used to electronically gather EHR patient data for CMS core measures, monitor patient care/CMS compliance, and provide decision support. qMetrix gives hospital staff concurrent patient dashboards to improve patient outcomes and hospital quality ratings. All patient data is immediately scored based on CMS requirements. There is no need to wait months to review compliance scores and staff can use this data to make and timely changes to patient care.

Features of the solution:

- qMetrix for Healthcare system monitors CMS core measures. Inpatient and outpatient measure sets are supported with more than 270 data elements.
- System accepts data from EHRs—either pulled or pushed—as well as manual data input
- System scores data and monitors in real-time with charts and graphs
- System can be linked to CMS vendor of choice
- Enables successful Value Based Purchasing (VBP)
- System real-time reports available on demand with capability for both drill-down and trending

The qMetrix Group expects a high standard of excellence in all our products. Our sophisticated scoring methodology has been designed to support the CMS inpatient and outpatient quality measure specifications. Great care has gone into confirming the immediate feedback our customers receive on their compliance scores is accurate. All scoring results have been validated against the CMS reporting solution.

About qMetrix Group

The qMetrix Group focuses on developing innovative software solutions for quality improvement. The group develops systems to gather and report quality metrics through electronic integration or customized apps using wireless devices such as tablets and smartphones. qMetrix then provides secure, customized, web-based reports to better improve the real-time performance for any organization seeking to improve quality and efficiency. qMetrix supports applications for Healthcare, Hospitality and Transportation.
