qMetrix

Inventory Solution

Customers require more and more instant feedback all the time. Do you need a way to manage your cargo transitions, inventory and exceptions? Look no further. qMetrix has a custom solution for you. We can design and develop an app to fit your needs.

Reduce data entry, streamline data collection and customize reporting based on customer needs.

Automatically send your customers cargo documentation for inbound and outbound shipments.

Exceptions can be recorded and reported automatically. The qMetrix Inventory Solution reduces paperwork and ensures the right people receive the documentation.

A web-based app manages all orders, load lists and releases.

An easy to use mobile app can be used on docks or in warehouses when moving cargo.

Barcodes can be created, printed and scanned to quickly enter cargo and track locations.

Track and Report

Manage all of your customers' unique requirements in one place. All reports can be customized to incorporate all data needed for reporting.

Customer Portal
Give your customers direct access to the data you want them to see. Provide manifests, load lists, receiving documents or inventory. All data is available only to those users who should have access.

Inventory Reports
Print, share or export inventory reports. Clerks have access to load lists, from a mobile device, no matter where they are.

Exception Reports
Found damaged cargo? Just enter the details and a report can be sent automatically to the customer or shipper responsible.

Take Photos of Issues
Photos are priceless when needing to resolve a claim. Take as many photos as you like and they will be saved with your exception report. Then your customers can see the status of the cargo and determine how they want the product handled.

Cloud Storage
All of your data will be stored in the cloud for you. Access your data from any internet browser.

Offline Mode
Don't have reliable WiFi? No worries, you can load, unload or move cargo offline and sync when WiFi is available again.
